ABSTRACT

This research aimed to present the roles of Kutchomphu subdistrict administrative organization in promoting and maintaining tourist attractions with case studies of the following seven natural tourist attractions: Hinnagkae, Kangkaikhia, Kanghai, Hadhinbanhinlad, Hadbandon, Kohdonkumphuang and Hadhindo. SWOT analysis was conducted to study the weaknesses, opportunities and threats found in performing the role. A TOWS matrix was used to form the strategies and determine the expected benefits of the proposed strategies. Findings of the study revealed that the roles of Kutchomphu Subdistrict Administrative Organization in developing and maintaining the tourist attractions were first determined by considering the roles of the local administrative organization regarding tourism development and the idea of community-based tourism. The researcher then used SWOT analysis to analyze strengths, weaknesses, opportunities and threats in performing the roles and applied the TOWS matrix to analyze the collected data based on community participation guidelines.

Two strategies were proposed for promoting and maintaining tourist attractions: Strategy I was budgeting to promote or support sustainable tourism development, and Strategy II was cooperating and networking with the local community and other local administrative organizations, together with community-based tourism promotion. The expected benefits to be gained by using the proposed strategies can be reflected in five dimensions of sustainable development: economic, social, political, cultural and environmental.

Keywords: Tourism Development; Sustainable Tourism; Community-based Tourism

Introduction

At present, the local administrative organizations are facing the problems in developing tourism as they lack effectiveness and clear directions in the process. The consequence results in failure in tourism as seen in 1) inconvenience in transport and so tourism is not developed as it should be, 2) lack of the experts and the personnel in tourism (Saowakun, et al., 2007 and Pusingha. 1999) 3) lack of participation of the public in management of tourism, lack of knowledge and understanding in management of the community tourism (Pusingha. 1999: abstract) and 4) inadequacy of budget in the development of tourism (Pairojrat. 2000: abstract). Thus, it is essential to find out the guidelines in developing the local administration organization for tourism at various levels in accordance with the administration power of the local government law (Chuaybumrung. 2009: introduction).

Considering the problems described above, the researcher is aware of the importance of the role of the local administration organizations in developing tourism. Hence the researcher conducted a case study of the tourist sites of Kutchomphu subdistrict, Phiboonmangsahan district, Ubon Ratchathani province. Kutchomphu subdistrict in the study has seven natural tourist attractions, namely Hinnangkae, Kangkaikhia, Kanghai, Hadhinbanhinlad, Hadbandon, Kohdonkumphuang and Hadhindo. The study was conducted to seek a guideline in enhancing the development of tourism to sustainability. The guideline can be used by Kutchompu subdistrict administrative organization to develop tourism efficiently.

The paper presents the role played by the local administration organization in supporting and
Objectives

1. To study the role of Kutjomphu subdistrict administrative organization in developing and maintaining of all natural tourist attractions in the study to be sustainable tourist sources.

2. To study the weaknesses, opportunities and threats confronted by Kutjomphu subdistrict administrative organization in developing and maintaining of all natural tourist attractions in the study to be sustainable tourist sources.

3. To propose the strategies for support the role of Kutjomphu subdistrict administrative organization in developing and maintaining of the tourist attractions to be sustainable sources.

Scope

1. The research covered seven tourist attractions:
   1.1 Hinnangkae located in Banhinsung.
   1.2 Kaengkaikhia located in Bankangcharoen.
   1.3 Kaenghai located in Banhinlad.
   1.4 Hadhinbanhinlad located in Banhinlad.
   1.5 Hadbandon located in Bandonsumran.
   1.6 Kohdonkumphuang located in Bansaento.
   1.7 Hadhindo located in Bansaento.

2. Population and sample groups consisted of 1) One representative from Kutjomphu subdistrict administrative organization, 2) fifteen local representatives, 3) eight representatives of tourists, and 4) four persons concerned with the role in the development of Kutjomphu subdistrict administrative organization.

3. The scope of the content was the study of the role of Kutjomphu subdistrict administrative organization in developing and maintaining of the tourist attractions to be sustainable sources based on the ideas of the local administrative organization. SWOT analysis was used to study the strengths and weaknesses, opportunities and threats. And TOWS matrix was used in recommending in term of strategies for support the role of Kutjomphu subdistrict administrative organization in developing and maintaining of the tourist attractions.

Research Methodology

The present study was a qualitative research using the method of non-participant observation. In-depth interview was used for the study of the issues of the community participation and the role in the implementation by Kutjomphu subdistrict administrative organization.

Research Instrument

The research instrument was the use of the questions in the interviews. The questions were based on two ideas as guidelines in raising the questions: 1) the idea of the roles of the local administrative organization for tourism development, and 2) the idea of community based tourism.

The questions used would lead to the strengths, weaknesses, opportunities, threats, and role of Kutjomphu subdistrict administrative organization in developing and maintaining of the tourist attractions to be sustainable sources and to
the proposal of the strategies in developing the tourist attractions as the sustainable tourist sources.

The first set of the questions was used to interview the representative of Kutchromphu subdistrict administrative organization to study the role in the sustainable development.

The second set of the questions was used to interview the village leaders and the villagers over the issue of the popular participation in the development of the tourist attractions to be sustainable ones.

The third set of questions was used to interview the representatives of tourists to examine the opinion of the tourists towards the development of the tourist attractions to be sustainable ones.

The fourth set of questions are used to interview those concerned with the role of Kutchromphu subdistrict administrative organization in the development of the tourist attractions. The subjects were the entrepreneur of accommodation, food shop, and those providing the security service (police officer and disaster prevention volunteer).

Data Collection

1. Interviewing the representative of Kutchromphu subdistrict administrative organization

In the study, the researcher interviewed Ms. Warisra Pho-ngarm, head of the office of Kutchromphu subdistrict administrative organization as regards the role of the body in developing and maintaining of the tourist attractions.

2. Interviewing the local representatives

The researcher interviewed the headmen of five villages and ten villagers. The samples of the headmen were selected by a purposive sampling and the samples of villagers were derived by an accidental sampling.

3. Interviewing the representatives of tourists

The researcher had publicity in holding activities in a pilot test in Kutchromphu subdistrict. Eight tourists took part in the activities and were later interviewed one after another.

4. Interviewing the persons concerned with the role in the development of Kutchromphu subdistrict administrative organization

The researcher interviewed an entrepreneur of accommodation, an entrepreneur of food shop, a police officer and a disaster prevention volunteer. They were selected by a purposive sampling.

Data Analysis

1. The researcher made a contemporary conclusion and reduced the data available to find out the main issues on the role of Kutchromphu subdistrict administrative organization in developing and maintaining of tourist sites.

2. After knowing the role of the local organization in question, the researcher did an analysis by using the basic indicator and the development indicators to find out the strengths, weaknesses, opportunities and threats.

3. The researcher analyzed SWOT matrix by emphasizing the community participation, which would lead to the strategies in developing and maintaining of tourist attractions.

4. The researcher synthesized the expected benefits from the strategies proposed under the context, ‘the role of Kutchromphu subdistrict administrative organization in developing and maintaining of tourist attractions,’ to reflect five dimensions in development: economic, social, political, cultural and environmental.
Results

The results showed the effectiveness and the strategies of the role of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions. The researcher reflected the effectiveness of the ideas concerning the local body and analyzed by SWOT analysis process. For the strategies, were derived from the combination between two ideas by using the process of SWOT matrix based on the community participation.

1. The effectiveness reflected from the idea of the roles of the local administrative organization for tourism development

Each tourist attraction could be detailed as follows.

1.1 Kanghai and Hadbandon (Watsrapatummalai)

It was found that the two of tourist attractions were clean. The finding was in line with the basic indicator in the system of developing and maintaining the tourist attractions according to the guidelines of the Department of Local Administration. Kanghai was preserved and cleaned by the owner of the land. Hadbandon (Watsrapatummalai) was cleaned by the Buddhist monks and other locals. Thus, both of tourist attractions were clean and the garbage bins were adequate.

1.2 Hinnangkae and Kangkaikhia

Hinnankae was preserved and cleaned by the village volunteers; however, the preservation and cleaning was not adequate as there were garbage and other wastes seen around. The main reason might be there were no rubbish bins or other containers for the wastes. As for Kangkaikhia, the responsibility in cleaning is taken over by the service agency; however, the service was not sufficient as the rubbish bins or other containers for the wastes were not adequately arranged.

1.3 Hadhinbanhinlad, Kohdonkumphuang and Hadhindo

It was found that there were no persons responsible for preservation and cleaning the three of tourist attractions and no sufficient garbage bins. The study found that Kutchomphu subdistrict administrative organization played the role in developing and maintaining of the tourist attractions as clearly seen in the sites of Kangkaikhia and Kanghai.

The operations of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions were in accordance with the basic indicator of the Department of Local Administration. In overall perspectives, it was found that all tourist attractions lacked a proper development and maintenance and inappropriate with the development indicators from the guidelines of the Department of Local Administration. In other words, 1) they lacked support and have no persons assigned in developing and maintaining of the tourist attractions, and 2) the tourist attractions lacked support or community participation in preserving the tourist attractions under study.

The findings from the idea of the roles of the local administrative organization for tourism development were summarized in table 1.

2. Effectiveness reflected from the idea of community based tourism

The idea could be seen in support and development of natural environment and support for regulations, and rules in management of environment.

The study found that Kutchomphu subdistrict administrative organization played the role in supporting and developing the natural environments related to tourism, for example, cooperation with the electricity generating authority to release fish and shrimp species to solve the problems of fishery resources caused by the building and closing Pakmoon Dam. The zone for the preserving fish species was established. There were zones for planting trees and not catching wild species. As regards the natural environments related to tourism, it was found that the landscapes were destroyed and damaged by overflowing water, especially, Kangkaikhia, Hadbandon and Hadhinbanhinlad which were affected by the building and closing Pakmoon Dam. The building and closing had a huge impact on natural environments and people’s way of living. The fish stock had dramatically reduced as a consequence. Although the cooperation with the electricity generating authority had released fish and other species into the Moon river, it could not solve the problem of fishery resources.

SWOT analysis for the role of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions to be sustainable tourist sources

From the process of SWOT analysis, there was no strength. The researcher found only the weaknesses, opportunities, and threats.

1. Weaknesses of the role of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions

1.1 Island tourist attractions (Kohdon kumphuang, Hadbandon) were abandoned and lacked a proper development and maintenance

1.2 There were no garbage collectors.

1.3 There were not enough garbage bins.

1.4 There were no persons in charge of the tourist attractions.

1.5 There was no community participation in development and maintenance of the tourist attractions.

1.6 Fish were illegally caught even during the egg spawning seasons.

1.7 There were no staffs and coordination with other agencies to solve the fishery resources.

2. Opportunities for the role of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions
2.1 There were budget from support of Ubon Ratchathani provincial administrative organization.

2.2 There were many groups of visitors from the other local administrative organizations came for learning and observation.

3. Threats confronted by Kutchomphu administrative organization.

3.1 There were not enough budget.

3.2 There were the effects of building and closing Pakmoon Dam.

Strategies for the role of Kutchomphu subdistrict administrative organization in developing and maintaining of the tourist attractions to be sustainable tourist sources by the process of SWOT matrix

The strategies came from the process of SWOT matrix and proposed two strategies: one was the modifying strategies by using budget for support in the development of sustainable tourism and the others were 1) the modifying strategies by coordination and cooperation and 2) the passive strategy in supporting community based tourism. For all of the strategies were the operations for sustainable tourism in five dimensions: economy, society, politics, culture and environments.

Strategy one : the modifying strategies by using budget for support in sustainable tourism development

1. Support and development for restoration in Watdonkumphuang to be a religious place as the learning source.

2. Support and development to provide the staffs for preservation and cleaning in tourist attractions.

3. Support and development to provide enough garbage bins at the tourist attractions.

Strategy two : 1) the modifying strategies by coordination and cooperation and 2) the passive strategy in supporting community based tourism.

1. The modifying strategies:

1.1 Support and coordination with the community to have rules and allocate the local people for preservation in the community and at the tourist attractions.

1.2 Coordination with the other local administrative organizations for solving the environmental problems.

2. The passive strategy in supporting community based tourism:

Support the community to preserve and clean the tourist attractions for raising awareness of environmental conservation by arranging the rubbish bins or by creating the campaign boards.

Expected benefits from the strategies

1. Kutchomphu subdistrict administrative organization is aware of the problems in developing and maintaining the tourist attractions and natural resources, which will lead to the right solution.

2. The community has a consciousness in developing and maintaining the tourist attractions and the natural resources. As a result, it is expected that the community will get strengthened.

3. The tourist attractions which are damaged or ruined are restored or revitalized to their conditions and values.

4. Watdonkumphuang is a tourist attraction for Buddhist study.
Discussion

The key issues of the research consisted of 1) the strategy one which showed the supporting operations in sustainable tourism development and 2) the strategy two which showed the direct operations in sustainable tourism development.

The strategy one was the budgetary strategies for solution in terms of support and development in the elements of the tourist attractions. It was in accordance with the research conducted by Asasongtham. (2010) which stated that preservation of natural environments and tourist resources is a factor of managing the community tourism in a sustainable way. The work is also in congruence with the research of Taweekun. (2001) which emphasized the development of the elements of tourism.

The strategy two consisted of 1) the strategies for coordination and cooperation, 2) the strategy in supporting community based tourism. The strategy two put emphasis on the community participation according to the study of Suansee. (2003) explained the sustainable dimensions in five aspects: economy, sociology, culture, politics and environments. In addition, the strategy two was in line with the research of Wongsaroj. et al. (2007) which found that the key mechanism to drive sustainable tourism is the participation from various sectors included the state sector, the entrepreneurs and the public sector. There was another relevant research conducted by Ueithaworn. et al. (2003) on the ecological tourism with the community participation in the area of Tungsalaengluang national park of Petchaboon province. The study found that the local people established the community organization to preserve the natural resources and manage the local ecological tourism.

Conclusion

The study found the problems confronted by Kutchomphu subdistrict administrative organization in developing and maintaining the tourist attractions. The threats found were lack of budget for the development, the building and closing Pakmoon Dam. There were two strategies: 1) the strategy one was the budgetary strategies for solution in terms of support and development in the elements of the tourist attractions and 2) the strategy two was for coordination and cooperation with the community and the other local administrative organizations. The expected benefits which are acquired are aimed for the community in five dimensions: economy, sociology, politic, culture and environment on the basis of tourism as the key instrument.

Recommendations for research

1. Kutchomphu subdistrict administrative organization should focus on requirement of the community for development because the tourism resources belong to the communities that depend on them for living.

2. Kutchomphu subdistrict administrative organization should develop the operations of the staffs involved the role in developing and maintaining of the tourist attractions.

3. Kutchomphu subdistrict administration organization should be evaluated in the effectiveness because it is necessary to improve the tourist attractions appropriately and in line with the needs for the communal developments.

Acknowledgement

The present work would not have been successful without the assistance from Dr. Suwaphat
Sregongsang and Assistant Professor Dr. Boonyasarit Aneksuk, my supervisor and co-supervisor, who always give advice, time and space to work.

I would like to deeply thank Dr. Suthida Jamsai Whyte, Ms. Suprawee Watiwuttipong, all faculty members from the Faculties of Business Administration and Liberal Arts, all staff from the office of Business Adminsitration, Ms. Siripat Lapchit, Ms. Lumduan Jarukamon and Mr. Peerawit Sophakun for their kind help and advice.

My thanks also go to Dr. Atthapon Siriwajapun for his recommendations and assistance. I am thankful to Ms. Warisara Pho-ngam, head of the office of Kutchomphu administration organization and other members for giving necessary information, advice and help in the process.

Last I express my profound thanks to my parents, Mr. Suwitchai Chuachote and Ms. Neeranut Chuachote who support and give me encouragement. I thank all my relatives who always express their concerns and support.
